Summary

AI/ML graduate with hands-on experience building and evaluating machine learning models — from **transformer**-based **NLP** classifiers to **CNN**-based computer vision and **retrieval augmented generation** systems. Comfortable working across the full pipeline: data collection, cleaning, model training, and evaluation.

Professional Experience

Data Analyst Intern, Linengrass

08/2025 – 09/2025

Delhi

- Scraped hotel data (name, address, amenities, pricing) for Bangalore from multiple websites, collecting **2,200+ of ~2,400** hotels
- Cleaned the dataset, removed duplicates, fixed inconsistent entries, filled in missing values so it could actually be used for analysis and reporting

Projects

Treasury — AI-Powered Thrift Marketplace 🔗

Built a fullstack OLX style resale marketplace featuring an AI driven listing pipeline: a fine tuned **TF-IDF/Logistic Regression classifier** for category detection, a **TinyBERT/MobileBERT NER model** for automatic attribute extraction, and a **FLAN-T5** model for auto-generated listing descriptions, paired with a **MiniLM embeddings** + 2-tower **neural recommender** for personalized home feed suggestions

Hybrid RAG + Calculation Engine — sentence transformers, Ollama, NumPy 🔗

Combined local vector retrieval using **sentence transformers** with an LLM via **Ollama** for domain Q&A, alongside a custom formula engine built with **NumPy** for numeric queries over structured game data.

Manufacturing Defect Detection (CNN) 🔗

Building a **CNN**-based classifier using **TensorFlow/Keras** and **OpenCV** to detect defective castings from the Kaggle Casting Product dataset, benchmarked against a classical CV baseline using **scikit-learn** and evaluated on precision/recall to minimize missed defects.

Fake Job Posting Detection - DistilBERT, NLP 🔗

Built a transformer-based classifier using **DistilBERT** to detect fraudulent job postings from a labeled dataset, evaluated using a confusion matrix and misclassification analysis.

Skills

Python (Pandas, NumPy, Scipy, TensorFlow, Keras, scikit-learn, matplotlib) • **SQL** •

NLP/Transformers • **Computer Vision** (CNN, OpenCV) • **RAG** (sentence transformers, Ollama) •

PowerBi • **Tableau** • **Excel**

Education

B.Tech in Artificial Intelligence and Machine Learning,
Noida Institute of Engineering and Technology

11/2022 – 05/2026
Greater Noida, UP
